9. Conclusion

1. Introduction

FITZONE is a gym and fitness website created using HTML5 and CSS3. The webpage presents a fitness centre and gives visitors an overview of its workout programmes, trainer categories, membership plans, facilities, class schedule and registration form.

The main purpose of the website is to display gym-related information in a clear and organised layout. Visitors can use the navigation links to move to important sections, review the available membership options and enter their contact details in the registration form.

The design uses a dark-coloured hero area, a teal header, orange call-to-action buttons and a simple white page background. The layout is arranged in three columns for programme, trainer, plan, facility and schedule items.

2. Project Objectives

- To create a structured multi-section webpage using semantic HTML elements.
- To apply CSS styling for colours, spacing, alignment, grid layout and hover effects.
- To provide navigation links between sections of the same webpage.
- To present gym programmes, trainers, membership plans and class information.
- To practise building and styling a basic HTML form.

3. Technologies Used

HTML5: Used to create the structure and content of the webpage. The code uses elements such as header, nav, main, section, form, input, select, button and footer.

CSS3: Used to control the appearance of the webpage, including colours, typography, spacing, Flexbox, CSS Grid, borders, shadows, hover transitions and a media query for smaller screens.

Additional technologies: No JavaScript, CSS framework, external library, database or server-side technology is included in the supplied source files.

4. Webpage Description

4.1 Header and Navigation Bar

The top header displays a flexed-arm emoji and the FITZONE brand name on the left. It uses a dark cyan background with white text. The navigation bar contains Home, programs, Trainers, Pricing and Register links. These links point to matching section IDs within the page.

4.2 Hero Section

The hero section contains the main heading “BUILD YOUR BEST BODY”, the tagline “Train Hard . Stay Strong . Live Healthy” and an orange “Join Now” button. It uses a dark slate background, white text, centred alignment and generous vertical padding.

4.3 Workout Programs

This section presents three programme cards: Strength Training, Cardio Fitness and Yoga & Flexibility. The cards are arranged in a three-column CSS Grid layout.

4.4 Trainers

The Trainers section displays three trainer categories: Strength Coach, Cardio Coach and Yoga Instructor. Each category appears in a separate card.

4.5 Membership Plans

The Membership Plans section contains Basic (999/- per month), Standard (1,499/- per month) and Premium (2,499/- per month). Each plan has a “Choose Plan” link that points to the registration section.

4.6 Facilities and Class Schedule

The facilities area lists Modern Equipment, Locker Rooms and Personal Training. A separate Class Schedule section lists Mon – Yoga, Wed – Cardio and Fri – Strength.

4.7 Registration Form

The registration form contains fields for full name, email address, phone number and an additional text field whose placeholder is “select text”. It also includes a membership dropdown with Basic, Standard and Premium options, followed by a Registration Form submit button. The inputs are marked as required.

4.8 Footer

The footer uses a dark navy background and displays “© 2026 FITZONE GYM | All Rights Reserved” in centred white text.

4.9 Visual Styling and Responsive Behaviour

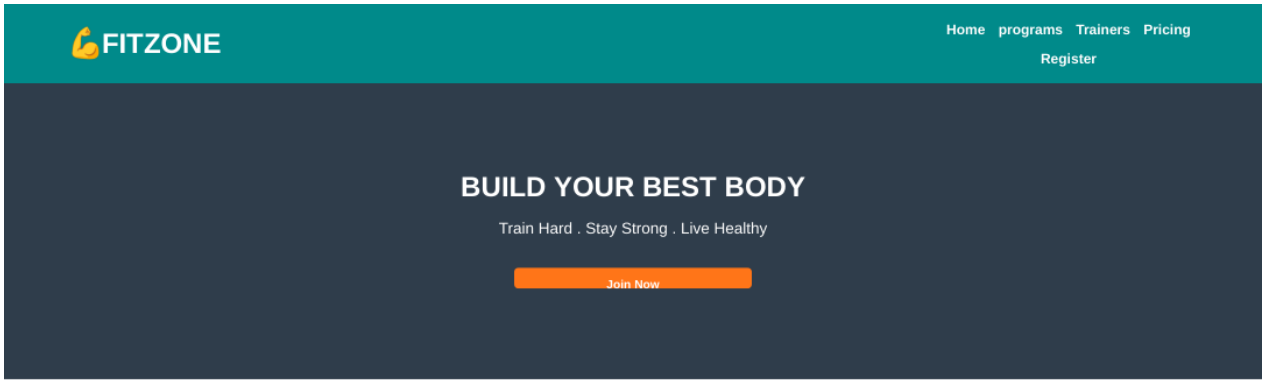

The body uses Arial with a white background and dark slate blue text. The header is dark cyan, the hero area is dark slate, and orange (#ff7518) is used for buttons and hover accents. Buttons have rounded corners and a hover colour/scale effect. Cards use white backgrounds, rounded corners and soft shadows; their hover effect moves them slightly upward.

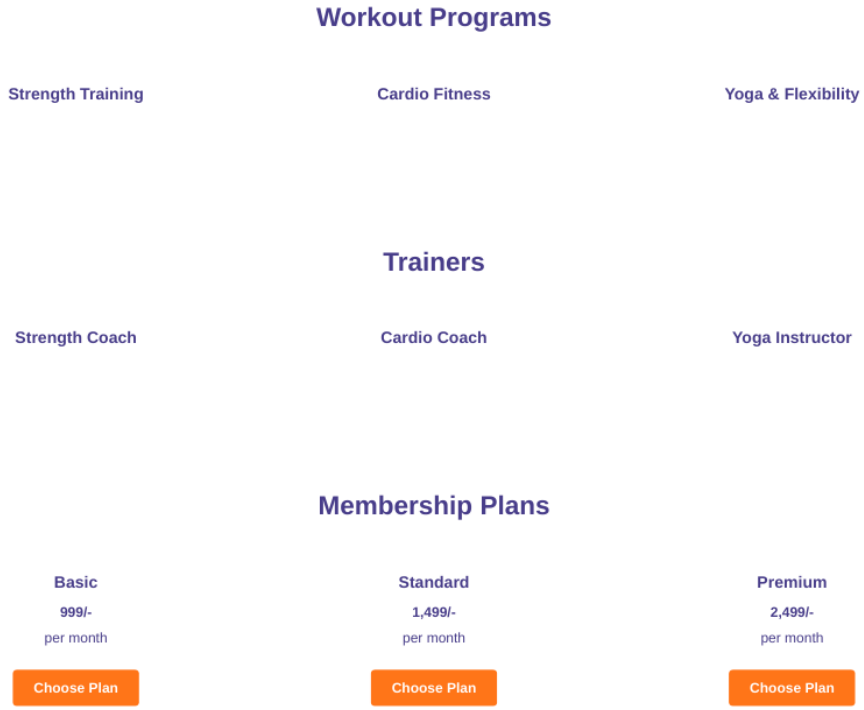

The CSS includes a media query at a maximum width of 768 pixels to centre the header content. The page uses a three-column grid for card groups. The supplied stylesheet does not define a mobile-specific one- or two-column grid, so the card grid may become narrow on small screens.

5. Actual Webpage Output

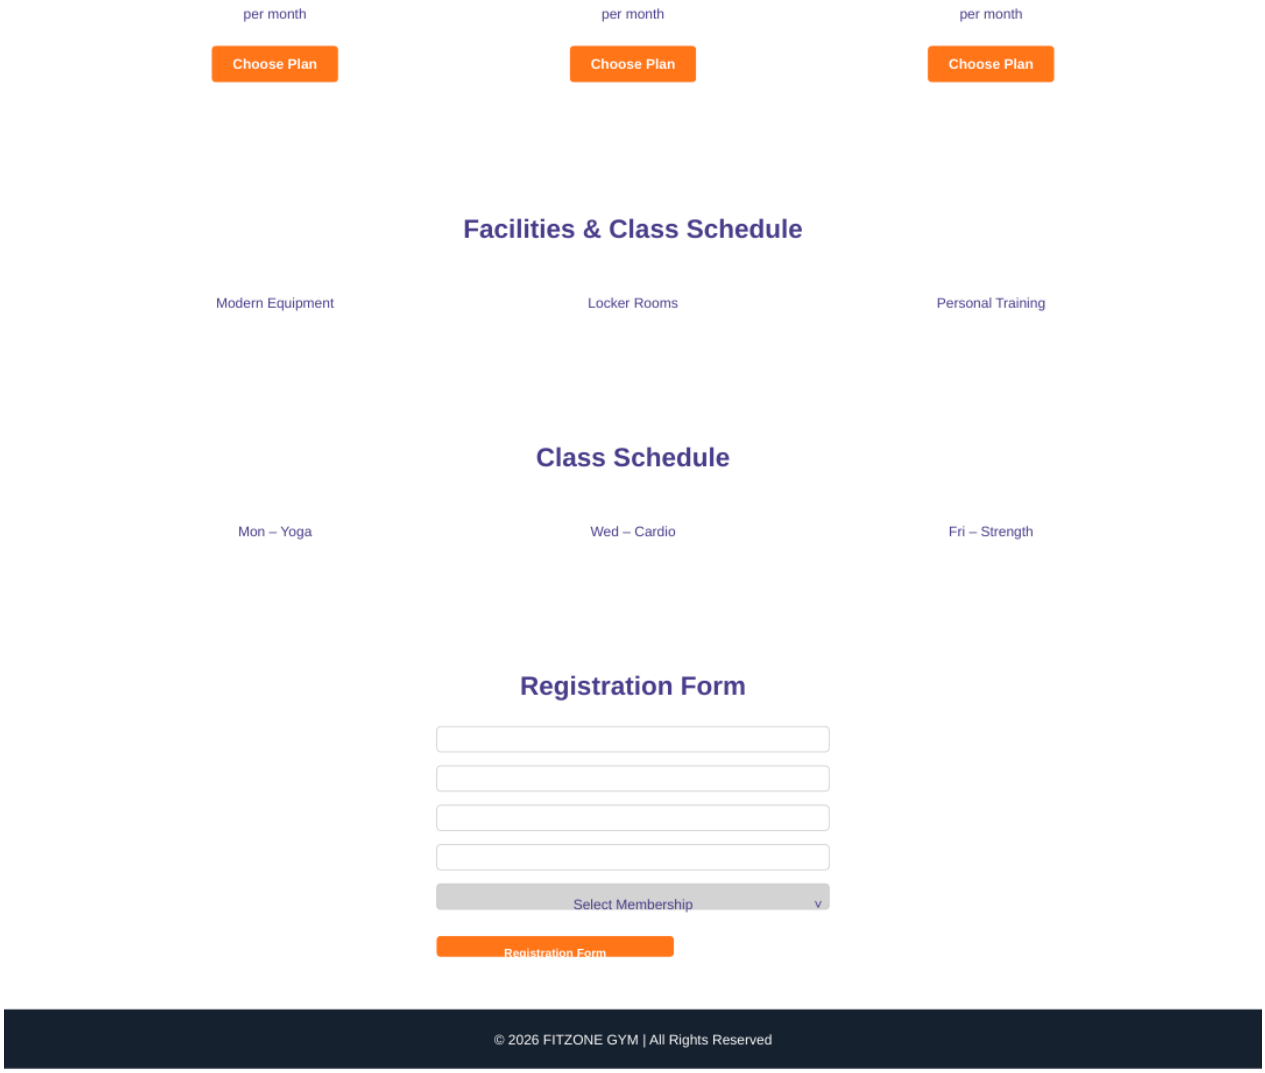

The following screenshots were rendered from the supplied HTML file together with its linked CSS stylesheet. The screenshots show the actual FITZONE page content and styling; they are not illustrative mock-ups.

5.1 Screenshot – Top and Main Sections

5.2 Screenshot – Lower Sections and Footer

6. Output Explanation

When the webpage is opened, the FITZONE header and navigation links appear at the top. Below them, a dark hero banner displays the fitness slogan and Join Now button. The page then continues with the workout programme and trainer categories, followed by the three membership plans.

Further down, the visitor can view the facilities and weekly class schedule. The registration area appears near the bottom and contains text fields, a membership selection list and a submit button. The dark footer closes the page.

The overall appearance is clean and section-based. Teal, dark slate, orange and white create contrast between the header, hero area, actions and content sections. The cards and buttons use CSS hover transitions.

6.1 Implementation Notes and Limitations

- No image elements or external image files are referenced in the supplied HTML, so the page output contains no photographic images.
- The “Join Now” control is a button with an id attribute but has no JavaScript handler or link destination in the supplied code; it does not itself navigate to the registration section.
- The registration form has no action attribute or backend connection. The HTML provides required-field validation, but the supplied project does not store or transmit registration data.
- The fourth text field uses the placeholder “select text”; it is reproduced as provided rather than reinterpreted.
- The supplied CSS includes a media query for header alignment, but it does not change the three-column card grid for narrow screens.

7. Source Code – HTML

The following is the complete HTML source supplied for this project. The source content is retained without changing its page structure or behaviour.

```
<!DOCTYPE html>
<html lang="en">
<head>
    <title>fitzone</title>
    <meta charset="UTF-8">
    <link rel="stylesheet" href="task 1.css">
</head>

        justify-content: center;
    }
```

9. Conclusion

Through the development of the FITZONE website, I learned how to structure a webpage using HTML5 and style it using CSS3. I practised creating navigation links, content sections, grid-based cards, buttons, form controls and a footer. I also learned how colours, spacing, typography and hover effects improve the visual presentation of a website. This project helped me understand the basic workflow of front-end web development and provided a foundation for learning more advanced web technologies.
